WRR-VP Farpointe Data WRR-44 Ranger Long-Range 433MHz Reader

Description

Ranger Receivers and Transmitters comprise Farpointe Data's long-range radio frequency identification (RFID) solution. This solution operates at the globally harmonized frequency of 433-MHz and offers exceptionally long transmission ranges of up to 61 Metres (200 feet). The WRR-44 receiver provides 4 Wiegand output channels simulating 4 separate readers. Depending on which button is pressed on the remote transmitters (bought separately) the corresponding Wiegand port will output the data in the same way as a conventional card reader when a card is presented - ideal for multiple gate access control.

- Long read-range up to 61 Metres (200 feet)
- Supports industry standard electronic access control interfaces
- Transmitters can also include a standard passive access control credential (optional)
- Transmission features rolling code & encryption
- Adjustable read-range can be reduced if required

The WRR-44 is available in 2 versions: standard and OSDP (note: only output channel "A" has OSDP) - please select your choice when placing your order.
